

## RealAcoustix Wood Maintenance Information

The following is provided as general maintenance information for all RealAcoustix wood products. Please note that care should be taken follow the directions carefully:

### **WOOD PRODUCTS (Diffusers, Columns etc.)**

Pre-Cat Lacquer or Water based finishes are applied to almost all RealAcoustix wood products. Although this kind of finish is hard and can be water-resistant, it does require special cleaning care. Protecting the finish through preventative care (such as keeping hands off and not exposing the products to moisture) will keep these products looking better longer. For times when you do clean, it will not take much time at all. In addition, most items you need are likely already available in your facilities.

#### Step 1

Remove dust with a soft cotton cloth. Wipe it over the wood, going with the grain.

#### Step 2

Mix tepid water and a very small amount (a couple of drops) of mild liquid soap in a bucket. Stir to create sudsy water.

#### Step 3

Wet a soft cloth in the suds. Don't get the cloth very wet, just damp.

#### Step 4

Treat stains first by dabbing at them with the damp cloth. Wipe dry. Next, wipe the damp cloth over the surface of the wood, going with the grain, and then wipe with a dry cloth.

#### Step 5

Polish the surface by gently rubbing it, with the grain, with a clean dry cotton cloth

*Please note that furniture polishes tend to attract dust, build up and should be avoided*
